17 NOV 1983

MEMORANDUM FOR: Chief, Operations, Physical Technical & Area Security, OS

FROM: [REDACTED]

Chief, Security Staff, New Building Project Office, OL

SUBJECT: Computer Support to the Headquarters Construction
Programs [REDACTED]

1. For background, on 20 July 1983 I met with [REDACTED] of ISSG and presented a set of requirements for construction era security enhancements. These originally included an unclassified computer system that would allow storage/retrieval of individual names by company, social security number, etc., and the capability of making such inquiries from either of two trailers spaced approximately one-half mile apart. In addition, it was proposed that construction change orders be treated in the same fashion, thus allowing Security the opportunity to review such change orders for any security impact. [REDACTED] subsequently presented a package to cover the above requirements and recommended the purchase of an Epson System. Originally, an operational time frame of 1 June 1984 was envisioned, which allowed adequate time for software programming if necessary. The recent terrorist attacks against American installations and personnel have prompted the Director of Security to take action to strengthen personnel access to the Headquarters compound. [REDACTED]

2. On 2 November 1983, I again met with [REDACTED] and presented him with the following additional security requirements to be incorporated into the construction site computer system.

- o A personnel access control system to handle from 50 to 450 construction workers needing access on any given day. It is estimated some 7,500 individual contractors will have access to the site during the 4-year construction program. The access control system is to contain a picture badge, mag strip, numerical encoder reader, card validator, printer, terminal, and backup system if economically feasible. The system must provide printouts of specific companies and their personnel as well as maintaining a daily history of all who have had access to the site. [REDACTED]

3. Naturally, any workable variation of the above requirements is acceptable. However, expediency is of the essence as a 10' x 50' contractor processing trailer is scheduled for delivery to the compound today. [REDACTED]
